Proficiencies

I love teaching myself new skills and have familiarity with many 3D modeling programs, game engines, and programming languages. Among those are Blender, Rhino6, and Solidworks, as well as JS, C++, Rust, and Python. I have no fear of learning any other software or language. Outside of computing I also love creating physically, with 3D printers, welding, and woodwork.

Education

Scappoose High School

- **Clubs:** Robotics Club, Ski & Snowboard Club
- **Elective Coursework:** My highschool was lucky enough to partner with PCC to host a full 3D printing maker space and metal shop. I always love work that merges CS and engineering, and consider my 3D modeling and CNC skills invaluable for creation and prototyping.

Portland Community College

- Calculus II, Intro to Computer Programming
- I attended PCC during senior year of highschool, due to the lack of rigor in remote schooling.

Oregon State University

- Extensive CS coursework that has augmented my self-taught experience with more background.
- Elective coursework across many other topics to broaden my knowledge.
- ML capstone project with industry partner Qorvo, doing semiconductor analysis.

Employment

Shipshape.ai | Lead AI Engineer **June 20th 2025 - August 31st 2026**

Worked on LLM services for customer support and internal development. Using high-powered cloud models, was able to educate the entire dev team on AI-assisted coding, and increase the speed and efficiency of customer support greatly through RAG, powerful tools, and escalation to human support only when needed.

Companion Intelligence | AI Systems Architect **March 1st 2025 - June 20th 2025**

Consulted on open source LLM / MCP service. The project utilized open source models and libraries to provide a competitive, self-hostable, alternative to buying API access to large AI providers.

Ginkgo Bioworks **March 1st 2024 - September 30th 2024**

Created novel visualizations for launch events as well as a data exploration website. The site collated many H5N1 data sources into an all-in-one visualization.

Poppy Health **December 23rd 2021 - January 17th 2025**

Contracted as a 3D modeling specialist for data visualization, as well as creating a custom solution to present their data over a scan on a live website.

OMIC R&D **July 6th 2020 - September 4th 2020**

Interned as an AR/VR developer, where I learned C# for Unity as well as 3D asset creation, and worked with a team to create a VR tour of the OMIC facility.
